

Submitter: Lucy Hitchcock

On Behalf Of: Unitarian Universalists for a Just Economic Commun

Committee: Senate Committee On Energy and Environment

Measure: SB525

Please pass SB 525. I've watched and heard a landscape company in our housing development and in public sites clouding the air and blasting noise where, for most years of my long life, raking leaves, brushing dirt and wandering gravel worked very well without pollution into airwaves or ears. Let's do the small, easy increments to fossil fuel use reduction as a positive signal that we really do intend to eliminate the major fossil fuel use that is damaging life on earth. Much earlier than 2026 would be better. Read this weeks's IPCC report and take it seriously. Every bit helps.
