

Submitter: Loretta Epp

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB522

Changing the name of this commission is really just an admission that the Globe is NOT Warming. Climate action is very vague and can be applied to any minute variation of weather. The climate is always changing and therefore government bureaucrats will be able to justify enforcing whatever the fad of the day is. I am old enough to remember when the New York Times warned us that the ice ages were returning, which did not happen. This is just another government power grab to keep Oregonians living in fear and poverty. Efficient reliable economical sources of energy are what allow us all to maintain a healthy lifestyle and economy. Government regulations and "control" of the environment will send our economy back to the stone ages.
