

I oppose this bill on the basis of "If you give a kid a cookie, he will want a glass of milk." They are going to demand more.

Homeless should not be a choice, as many of them are. Most need medical and psychology care that are being ignored. Worst, many are self medicating and are a danger to self and others.

Homeless need to be in a safe and monitored shelter, with proper restroom facilities and a place to receive mail. They need a chance to speak with a counselor about getting their lives together.

Giving them free range and limitless claim to public land will only make a bad situation worse.

What will happen when one person claims too much public land?

What will happen when all public land is gone?

What will stop them from building a "more permanent " structure to protect themselves from the elements?
