Re: HB 5030

Dear Committee Members,

I am writing in support of La Clinica's Acute Care Clinic project to expand urgent care services in Jackson County. In the last three years, if not longer, our community has lost a great deal of our urgent care capacity which has forced residents to use crowded, and expensive, emergency room services for issues that could be easily handled in a clinic setting.

For nearly thirty-five years, La Clinica has provided the health care access and delivery of services to Jackson County residents who most need care. Over these many years, La Clinica has increased its health care services, in terms of both facilities and types of care, and this project will continue that tradition.

La Clinica's target population is 77,113 residents who earn lower incomes. This represents 35% of our community who cannot afford the high cost of emergency room care for non-emergency reasons. Our hospitals also can not support the lack of payment as well as the low reimbursement rate by Medicare for the numbers of people that they are required to see through the ER.

In all, this community based Acute Care project will benefit our community in the following ways:

1. Provide an affordable alternative to emergency department visits to reduce overall costs and prevent large medical care debt.
2. Provide more same-day, walk-in appointments for working folks who can't always plan their appointments and put off needed care.
3. Provide x-ray and ultrasound diagnostic services at an affordable price.
4. Provide prescription drugs at an affordable price.
5. Serve the residents of nearby emergency housing shelters at the City of

Medford Navigation site and Urban Campground.

6. Provide an entry point for La Clinica's behavioral health, dental health, and wellness services to community members who are uninsured for these services.

La Clinica will remodel an existing 2,728 square-foot building that currently serves as their temporary Acute Care Clinic to add a processing lab and a retail pharmacy with drive-up capabilities. Both services will reduce the cost of care and improve health outcomes for our larger community.

- According to the AARP Public Policy Institute, the average annual retail cost of drug therapy for prescription drugs in 2017 was almost \$20,000 per year. Low-income families and those on a fixed income must frequently choose between their health and affording other basic needs.

This project will also enable La Clinica to build a new 7,038 square-foot Acute Care Clinic to house twelve exam rooms, x-ray, and ultrasound services. This clinic will serve as La Clinica emergency response site.

- To limit airborne infections, two exam rooms will have designated HVAC systems and heavy-duty exhaust fans.

- The site will include solar and generator capabilities to operate during power outages.

I strongly encourage funding this improvement to our health system. This is a great opportunity to improve the health of our community and reduce the cost of health care for everyone.

If you have any questions, please contact me at

Sincerely,

Kathy Bryon, MPH
