

Submitter: Jo Alexander

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB4130

Not being a lawyer or a politician, I have to note that I find the wording of HB4130 rather difficult to comprehend, but it is my understanding that it will help to prevent equity financing organizations from participating in decisions on medical care, and will give physicians more independence. It has been shown that the purchase of medical facilities by financial organizations virtually always leads to worse care, and it's obvious why -- the financiers are making an investment, expecting a profit; I want my doctor to make professional decisions about my care without pressure from above. Please support this bill.
