

Submitter: David Wall

On Behalf Of: Mr Oregon SUPPORTS HB 4083

Committee: House Committee On Emergency Management, General Government, and Veterans

Measure: HB4083

I SUPPORT [HB 4083].

I agree coal is a nasty power source. BUT...OREGONAINS BE-AWARE...

Oregon currently gets (21.83 to 26%) of electrical energy needs from coal burning facilities in (11) states.

Oregon receives approximately (38.42 to 51%) from Hydrostatic electric power generation but...that's going to change.

We have those who support destroying Dams (4 along the Klamath River) for a soon to be realized drop in Hydroelectric power generation.

There are "NO" Nuclear power generation in Oregon.

Only 0.8% of electrical power comes from solar, wind, biomass. *Although the State of Oregon (2021 states 9.33% comes from wind).

Natural gas powered (Cogeneration) electrical power accounts for roughly 14.07% in 2021 but now? {roughly 30%?}.

Meanwhile, China and India are going whole hog on coal fired power plants from their respective electrical energy.

Although COAL divestiture is the flavor for today (and future?)

SIGNIFICANT TARIFFS should be placed upon all Chinese and Indian products being sold in the United States of America as well as all "investments" made in the aforementioned countries until the climate is saved.

David S. Wall

Mr. Oregon Concur, "Be-Aware, there are many conflicting percentages of energy production and usage by Oregon listed in the blogosphere."
