On Behalf Of:

Committee: Senate Committee On Natural Resources and Wildfire

Measure: SB1590

There is no empirical evidence or peer-reviewed study that links the current restrictions to having any positive effect on fish populations. Wake sports largely take place in the summer, outside of key migratory or spawning months. Studies show that wake boats waves, when operated at least 200 feet from shore, do not carry enough energy to have a significant impact on most shorelines.

Implementing a standardized factory weight limit not only prevents larger boats from towing riders but also streamlines enforcement. The present weight limit (combined factory dry weight and ballast) has no national standard which has posed significant challenges for consumers to determine if their boat is eligible and for the marine board to accurately enforce.
