

Submitter: John Woods
On Behalf Of: The Perfect Villian
Committee: Senate Committee On Energy and Environment
Measure: SB1559

I am always amused that people can give such explicit facts about CO₂. Yet they have never seen it, tasted it. You can't feel CO₂ but it is the most insidious of villains, it exist in every room it exists in every country, region and area. Now you would think as dangerous as the gas is made out to be, all of us would be dead from Carbon Dioxide poisoning. Has anybody ever seen the movie Predator? The premise is there is an alien that has a device, a suit or something that makes them invisible. Now CO₂ starts out invisible so there is a problem right from the start.

Yet this gas can only be measured by scientists that have vested interests in making this gas a reason to give them more money. They take their little instruments and they measure CO₂ to some phenomenal level of 10, 20 parts per million, or PPM. Now this is truly fascinating that they have instruments that can suck through it millions of pounds of air to come up with their CO₂ value of say 10 parts per million. Oh. Bother !! my sources say they don't suck through a million pounds of air, they take a small sample and "EXTRAPOLATE" their results. So let me follow this you take a small sample and you extrapolate the results? Extrapolate is a fancy scientific word the scientists use to impress the unwashed masses. It means they "GUESS" what the final answer is. But guess is easily understood and doesn't bring in those large infusions of money from the Carbon Shocked people that are needed to continue the fraud.

Now we have all heard that more CO₂ raises the ambient temperature of the planet. So in light of that assertion my question is "HOW MUCH CO₂ NEEDS TO BE REMOVED TO COOL THE PLANET JUST ONE DEGREE?" This is a funny question because every-time I ask it, I get well we can't say or measure that or things don't work that way. Funny isn't it? they can tell you more CO₂ raises the temperature of the planet, yet they can't tell us how much CO₂ we need to take out or "sequester" to cool the planet.

According to these vested scientists we need trees to sequester the CO₂. Honestly you would think that with all this sophisticated instrumentation that is being used to monitor CO₂, they could build a CO₂ sucking vacuum cleaner that would remove the CO₂ from the atmosphere and store it somewhere. Oh crap I have forgotten that CO₂ is the perfect villain you can't see it, you can't feel it, or taste it, it exists in the air and the vested scientists use instrumentation to say it is there. I guess vacuuming it up is not feasible either. Then comes the problem of where do you store the errant

CO2s maybe we can store them where all those freed glutens are hiding. Thus the perfect villain ????? hiding everywhere yet nowhere to be seen.

This SB 1559 is more Climate idiocy fee good thinking that little Oregon can affect the whole world
