

Submitter: Norman Kralman

On Behalf Of: NA

Committee: Senate Committee On Energy and Environment

Measure: HB4015

Battery capacity let alone problems for the future of our limited resources and to know the cause and affect of battery storage needs far more research and opportunity for public review and in put before the state hands the issue over to the Energy Facility Siting Council which has already proved to weigh too much authority in green energy let alone how to store it.

the public deserves farm more information than to force a slanted vote from the state legislators.

Respectfully,

Norm Kralman
