

Submitter: Anthony Behel
On Behalf Of:
Committee: Senate Committee On Rules
Measure: HB4130

To whom it may concern,

I strongly support House Bill 4130 as it set a precedent on how much say a business/corporation will have on medical care. Which if all honestly should be little to none! Since when has saving lives been something that needs to be profitable or something that requires money being made to even be done at all. It is truly sickening that the people or doctors and nurses even have to make the argument that they should have a final say on care of patients when that should've been that way from the beginning. They are the ones who have the qualifications to care for and responsibility of said patients. It falls on their shoulders the sheer weight of necessary medical decisions, not shareholders or the people in the business who only seem to care about the bottom line, or profit margins and marginally about the lives and health of the people their careless decisions have affected! If you have the heart or the spine please use your voice and your vote to support this bill and make a difference in hundreds of thousands of Americans lives as well your own as this will help everyone in the long run not just the impoverished but also those who have aplenty will benefit from this bill coming into effect. Thank you for your time, may it be used wisely.

Sincerely, Anthony Behel
