Total	3,106	100%	\$323,949,931	100%

Note that “% of Tax” column does not represent total reduction in tax if threshold were raised to that level for all estates. For instance, an increase in the threshold to \$1.5 million would have reduced taxes by an average of 23 percent between 2016 and 2022.

Estate Tax Timing of Policy Impacts

Estate Tax Returns are Due 12 months after decedent's death (was 9 months before 2022)

- Commonly extended 6 months

Estate Tax Payments are due 12 months after decedent's death

- Payment extensions are permitted

Consequently, Estate Tax changes take two years to phase in

For example: Date of Death 2026,

about 35% of payments in FY2027

about 65% of payments in FY2028

General Impact of Increased Thresholds

- Threshold Increases are generally implemented to apply to every taxpayer
 - Increase of first \$100,000 in threshold reduces revenue by about 5.7%
 - Each additional \$100,000 reduces revenue by less
- **Setting Threshold at \$1.4 million**
 - \$400,000 increase in threshold
(about 19% reduction in tax)

Portability Policy Choices

Estate Tax Portability allows a surviving spouse's estate to use the unused portion of a prior-deceased spouse's Exclusion

**Currently Individuals have \$1 million exclusion –
Portability gives married couples a joint \$2 million exclusion**

- Prospective or Retrospective Portability
- Choice determines when benefit begins -- death of first or second spouse
 - **Prospective Portability – Applies at death of first spouse**
Allow Surviving Spouse estate to unused portion of exclusion of prior-deceased spouse for prior deceased spouse deaths starting 2026 (or another year)
 - **Retrospective Portability – Applies at death of second spouse**
Allow Surviving Spouse estates starting in 2026 to unused portion of prior-deceased spouse for prior deceased spouse deaths from any year

Reporting/Filing for Unused Exclusion

- Require using same timeline as current estate tax returns
- Expand timeline

Portability Impact

- The tax reduction of Estate Tax portability is experienced at the death of the second spouse.
- A surviving spouse has an average life expectancy of 10 to 12 years after the death of a first spouse, so **the tax effect phases in over decades.**

Prospective Portability Revenue Impact \$Million

FY26	FY27	2025-27	2027-29	2029-31
0.0	-1.1	-1.1	-12.5	-29.7

Retrospective Portability Revenue Impact \$Million

FY26	FY27	2025-27	2027-29	2029-31
0.0	-9.2	-9.2	-58.9	-75.9

- Note retrospective portability estimated here assumes unused amount of exemption needs to be reported on tax returns that have been filed timely for pre-deceased spouse.
