

ANALYSIS

Department of Education Fiscal Transparency

Analyst: Wendy Gibson

Request: Acknowledge receipt of a report on fiscal transparency.

Analysis: The Oregon Department of Education (ODE) submitted a report in accordance with a budget note in HB 5014 (2023).

Budget Note: The Oregon Department of Education (ODE) collects and maintains a wide variety of data from local school districts, including revenue and expenditure budgets and audited actual annual revenues and expenditures. The Department is directed to research ways in which to make its school and district-level financial data publicly available on a web site in a searchable, user-friendly format. Users should be able to query and display school and district-level aggregated expenditures and revenues at varying levels of detail and in varying visual formats. The Department shall report to the Education Subcommittee of the Joint Committee on Ways and Means during the 2024 legislative session on its research, including technologies reviewed and costs and timelines for implementation.

Additionally, on an annual basis, the Department of Education shall publish a written report on school district-level revenues and spending by each school district in Oregon. The report should display actual revenues and expenditures in a fiscal year compared with the school district's budgeted revenues and expenditures for that year, aggregated by function and by object, and including budgeted and unbudgeted ending fund balances. This written report shall be presented to the Joint Ways and Means subcommittee on education no later than February 28th of each year.

Collectively, Oregon school districts spent \$18,729 per pupil in the 2022-23 school year, which is 13% more than the national average of \$16,526.¹ According to data from ODE, the amount varied widely across school districts, with some school districts spending more than \$20,000 per pupil. The data also shows that the amount of spending is not directly correlated with increased student outcomes.

¹ ODE Data Source: <https://www.oregon.gov/ode/schools-and-districts/grants/Pages/School-Level-Expenditure-Report.aspx>.
National Data Source: 2023 Annual Survey of School System Finances, United States Census Bureau.

ODE collects and maintains a wide variety of data from local school districts, including revenue and expenditure budgets and audited actual annual revenues and expenditures. The Department received \$2.2 million and six positions in SB 5701 (2024) to create the Office of Fiscal Transparency to develop and maintain publicly accessible data dashboards.

Despite the data collection, it remains difficult to evaluate the efficiency of spending and the overall fiscal health of Oregon's schools. School districts across the state use multiple accounting platforms to manage their funding and then summarize their accounting entries to align to ODE's Chart of Accounts for more consistent financial reporting across the state. However, this process creates limitations for data analysis, including a lag of 18 months or more and an inability to see expenditure details. Recognizing these limitations, the Department has reported on high-level expenditure and revenue comparisons from fiscal year 2023 to gauge financial competencies in forecasting revenue and expenditures.

The report contains comparisons, both statewide and by school district, of planned revenues and expenditures versus actual revenues and expenditures. The report organizes the information by the type of revenue and category of expenditure spent. The Department analyzed the data to produce key trends, make recommendations for improvements, and propose the next steps toward enhancing fiscal transparency.

ODE reports that 25% of school districts do not maintain an adequate ending balance, but does not include any explanation for why the balances are so low. The Government Finance Officers Association (GFOA) recommends an ending balance of 16% in general fund revenues to mitigate current and future risks, including potential tax revenue declines. Of the 54 school districts below the recommended threshold, 26 are below 10% with five school districts reporting under a 2% ending balance.

Overall, the level of data reporting is inadequate to determine what is driving the fiscal changes and whether more efficient spending would lead to stronger student outcomes. The State School Fund is one of Oregon's largest financial investments, and as school district expenses continue to rise, so does the taxpayer's interest in how the funding is being spent. ODE reports the Office of Fiscal Transparency is continuing to work on adjustments to the Chart of Accounts to capture a higher level of detail. Additionally, the office is reviewing potential mechanisms to minimize the lag in receiving data from school districts.

Recommendation: The Legislative Fiscal Office recommends acknowledging receipt of the report.

Request: Report on school district-level revenues and spending.

Recommendation: Acknowledge receipt of the report.

Discussion: The Budget Report to House Bill 5014 (2023) included a budget note directing the Oregon Department of Education (ODE) to research ways to make school and district-level financial data publicly available and searchable in a user-friendly format to increase transparency. The budget note also included the following direction:

Budget Note: School Funding Transparency

Additionally, on an annual basis, the Department of Education shall publish a written report on school district-level revenues and spending by each school district in Oregon. The report should display actual revenues and expenditures in a fiscal year compared with the school district's budgeted revenues and expenditures for that year, aggregated by function and by object, and including budgeted and unbudgeted ending fund balances. This written report shall be presented to the Joint Ways and Means subcommittee on education no later than February 28th of each year.

The report submitted by ODE meets the requirements outlined in the budget note. It includes statewide and district-level financial information for fiscal year 2023, displays budget to actuals data by fund type, and provides possible explanations for variances between final budget figures and actuals. The report also highlights budget to actuals by function, such as instruction, support services, and capital expenditures. Beginning fund balances indicate districts have varying levels of reserves to maintain budget flexibility in future fiscal years. On a statewide basis, reserves totaled approximately 16 percent of revenues or 20 percent of expenditures. This average is in line with national reserve balance recommendations for local governments. In contrast to prior decades, state revenue continues to comprise a larger share of district budgets at 45 percent of the total.

In addition to trend analysis, the report includes potential actions to improve financial reporting consistency and ease district reporting burdens. According to the report, "The current collection system was not designed for financial reporting. It does not produce clean, balanced data, and the system's coding setup lacks strict controls, which leads to inconsistent categorization of financial activities. This system also fails to support timely data collection and updates to the chart of accounts."

During the 2024 Legislative Session, the Legislature approved \$2.2 million General Fund and authorized the establishment of six permanent positions to develop and maintain publicly accessible data dashboards featuring school district financial data. With resources committed and the completion of this initial report, ODE has made progress identifying the value of existing data and developing recommendations to advance transparency and reporting consistency in the future. District level considerations should be addressed in any reporting or chart of accounts restructuring, to ensure statewide and district level needs are met with proposed changes.

Oregon

Tina Kotek, Governor

OREGON
DEPARTMENT OF
EDUCATION

Oregon achieves . . . together!

Dr. Charlene Williams

Director of the Department of Education

January 31, 2025

Senator Kate Lieber, Co-Chair
Representative Tawna Sanchez, Co-Chair
Joint Committee on Ways and Means
900 Court Street NE
H-178 State Capitol
Salem, OR 97301

Dear Co-Chairs:

Nature of the Request

ODE has submitted the required annual School Funding Transparency report per the HB 5014 (2023) budget note (see excerpt below).

“Additionally, on an annual basis, the Department of Education shall publish a written report on school district-level revenues and spending by each school district in Oregon. The report should display actual revenues and expenditures in a fiscal year compared with the school district’s budgeted revenues and expenditures for that year, aggregated by function and by object, and including budgeted and unbudgeted ending fund balances. This written report shall be presented to the Joint Ways and Means subcommittee on education no later than February 28th of each year.”

Action Requested

ODE respectfully requests acknowledgment and acceptance of the annual School Funding Transparency report.

Sincerely,

Dr. Williams
Oregon Department of Education Director

School District – Level Budgeted Revenues and Spending Report

Prepared by the Office of Finance
and Information Technology and
Fiscal Transparency Unit

February 2025

School District Budget Revenue and Spending Report

Executive Summary	3
Overview of School District Revenues and Expenditures	5
Detailed Comparison by Fund	6
Detailed Budget to Actual Comparison by Source and Major Function	12
Detailed Comparison by Object	16
Beginning and Ending Fund Balances	16
Analysis of Key Trends and Variances	20
The Role of the ODE in Fiscal Transparency	21
Current Reporting Challenges and the Path Forward	21
Building Partnerships and Supporting Districts for Long-Term Success	22
Conclusion	23
Appendix A: General Fund Ending Fund Balance by District	24
Appendix B: Budget to Actuals by District	30

Executive Summary

This report responds to the Budget Note included in the budget report for House Bill 5014 from the 2023 Regular Legislative Session. Its primary purpose is to analyze school district revenues and expenditures, offering meaningful, timely, and actionable insights for policymakers, school districts, and other stakeholders.

Scope and Methodology

This report focuses on governmental funds, analyzed by source (e.g., state, federal, or local revenues) and function (e.g., instruction, support services, or debt service) from fiscal year 2023. Major and non-major fund classifications were excluded to enable consistent aggregation and comparison of financial activity across all funds.

Data

Data was sourced directly from district audit reports, ensuring high reliability and credibility through rigorous external review. The report uses a budgetary basis, reflecting school districts' planned revenues and expenditures, and evaluating action performance against these plans. This contrasts with accrual or modified accrual accounting by emphasizing cash flow and appropriations.

Two appendixes at the end of the report provide detailed financial data by district.

Key Findings

- **Revenues and Spending Patterns:**
 - State Sources contribute 45% of district revenues, followed by local sources at 35%
 - Expenditures are primarily directed toward instruction, 42%, and support services, 31%, reflect a focus on educational priorities
- **Budget Variances:**
 - Districts demonstrated strong revenue forecasting, with most funds aligning budgeted revenues closely with actuals.
 - Expenditures, however, showed significant variances, particularly in capital project funds, which were underspent by 66% of the final budget. This variance may stem from the carryover of significant beginning fund balances from FY22.
- **Ending Fund Balance Insights:**
 - 25% of all districts fell below the Government Finance Officers Association (GFOA) recommended practice of retaining 16% of revenues. These districts may face financial instability, underscoring the need for targeted support.
- **Timeliness of Data:**
 - Financial data delays of up to 18 months hinder informed decision making. Timely, accurate, and standardized reporting is critical for effective resource allocation.
- **Additional Considerations:**
 - The audited financial statements are essential for comprehensive understanding of district finances. Readers of this report are encouraged to consult each district's publicly available reports, which include detained notes and schedules for additional context.

School District Budget Revenue and Spending Report

Looking Ahead

The Oregon Department of Education (ODE) is committed to improving fiscal transparency and aid in greater understand of financial data for decision-making across the educational system in Oregon. By leveraging the audit-reviewed data, coupled with actionable insights, ODE aims to enhance financial oversight and reduce administrative burden for district partners.

Moving forward, ODE will continue refining systems to provide timely, accurate data that supports stakeholders, partners, legislative members, and the Governor in ensuring education funding in Oregon is both transparent and impactful.

Overview of School District Revenues and Expenditures

Revenue and Expenditure data are collected by the Oregon Department of Education through district submitted audits as required by ORS 327. Understanding what constitutes revenue sources in districts across the state can inform understanding of the districts fiscal dynamics and funding stability. Whereas districts' expenditures can be the foundation for conversations about spending patterns and the expenditures alignment with school success.

Figure 1: Statewide District Revenues by Source (FY23)

Figure 1 reflects the sum of revenues for all districts in the state, split out by source. State Sources form the largest portion of total district revenues (45%), underlining the impact of state funding in Oregon education. Local Sources (34%), Long Term Debt Financing¹ (10%), and Federal Sources (8%) are the next largest sources, showing district reliance on multiple funding streams.

It also displays the impact of the state school fund and state funded grants to districts, as the largest portion of district total revenues across the state. Closely behind are local sources, making up a third of district revenue flows. A district's breakdown in revenue sources can provide an understanding about the source of their major grants and funding flexibility, depending on the requirements of the revenue sources.

¹ Long term debt financing includes bond proceeds, mortgage and loan receipts, and lease purchase receipts.

School District Budget Revenue and Spending Report

Figure 2: Statewide District Expenditures by Function (FY23)

Figure 2 reflects total expenditures for all districts in the state, split out by function. The largest expenditure category for districts is Instruction, which accounts for 42% of total spending, emphasizing the priority of direct educational activities. Support Services rank second at 31%, reflecting significant spending on activities supporting instruction, such as administration, counseling, and maintenance. Smaller portions are expended on categories like Facilities Acquisition and Construction (11%) and Debt Service (10%).

With the highest spending categories represented by instruction and support services across the state, the district focus is on these high priority areas. Facilities acquisition and construction and debt service make up roughly 20% of total district expenditures across the state, pointing to the costs that these can carry on a district's spending. How each of these expenditure categories break down by district can be telling about a district's priorities and flexibility with funds. Review Appendix B to see how each of these are broken down by district.

Detailed Comparison by Fund

Districts formally adjust their budgets throughout the year as needs arise, allowing the review of original and final district budgets. This data is also collected by the Oregon Department of Education through district submitted audits. Comparing district budgets at multiple points to actual revenue and spending can support understanding of districts' abilities to plan for their inflows and estimate costs as well as changing priorities as time goes on.

School District Budget Revenue and Spending Report

Figure 3: District Revenue Sources by Fund (FY23)

Figure 3 shows the budget to actual revenue comparison for all districts across the state, with the blue bars representing districts' beginning of year budget (Original Revenue), the green bars representing districts' end of year budget (Final Revenue), and the pink representing the revenue the districts actually received (Actual Revenue) by fund category.

100 General Fund:

- **Original Budget:** \$8.96B
- **Final Budget:** \$9.04B
- **Actual Revenue:** \$9.38B

The general fund is the primary operating fund and accounts for all revenues except those required to be accounted for in another fund. The State School Fund is included in the general fund. In fiscal year 2023, there was minimal difference in district general fund revenue between original and final budgets and actual revenue, which came in roughly 4% higher than the final budget.

200 Special Revenue Fund:

- **Original Budget:** \$4.01B
- **Final Budget:** \$4.08B
- **Actual Revenue:** 3.53B

The special revenue fund accounts for revenue sources that are legally restricted for specific purposes such as classroom supplies and equipment and for student body funds that support school activities. State and federal grants are accounted for in this fund, other than the State School Fund. In the fiscal year, total district revenue increased slightly in the special revenue fund between the original and final budgets. Actual revenue came in around 14% lower than district original and final budgets. This suggests some room for improvement in mid-year updates and adjustments to reflect additional resources.

School District Budget Revenue and Spending Report

300 Debt Service Fund:

- **Original Budget:** \$1.51B
- **Final Budget:** \$1.53B
- **Actual Revenue:** \$1.53B

The debt service fund provides for the payment of principal and interest on general obligation bonded debt, which includes debt service on capital and PERS bonds. Property tax is the primary revenue source for this fund. There was close alignment between original, final, and actual figures indicate stability in district's ability to project and plan for debt service-related revenues.

400 Capital Projects Fund:

- **Original Budget:** \$3.42B
- **Final Budget:** \$4.27B
- **Actual Revenue:** \$4.1B

The capital projects fund accounts for activities related to the acquisition, construction, equipping, and furnishing of facilities. Districts adjusted original to final budget to align closer to actual revenue, with actual revenue ending only slightly lower than final budget.

On the whole, there was minimal variance between total district general fund, debt service, and capital project final budget figures compared to actual revenue. Districts with variances between original, final, and actual revenues may be experiencing challenges in accurately forecasting revenue streams or responding to mid-year funding adjustments. Districts falling into this parameter may need enhanced forecasting methods and adaptive budgeting practices to manage fiscal uncertainty effectively. Review Appendix B to see how each of these are broken down by district.

School District Budget Revenue and Spending Report

Figure 4: Major Expenditure Categories by Fund (FY23)

Figure 4 shows the budget to actual expenditures comparison for all districts across the state, with the pink bars representing districts' beginning of year budgets, the green bars representing the districts' end of year budgets, and the pink bars representing districts' actual expenditures by fund category.

100 General Fund:

- **Original Budget:** \$8.63B
- **Final Budget:** \$8.71B
- **Actual Expenditures:** \$7.75B

200 Special Revenue Fund:

- **Original Budget:** \$3.88B
- **Final Budget:** \$3.95B
- **Actual Expenditures:** \$2.88B

Total district general fund and special revenue fund expenditures came in around \$1 billion below budget. This is 11% lower for the General Fund and 25% lower for Special Revenue Fund. This could indicate district challenges with forecasting throughout the year or possible cost savings or delays in major spending categories for districts.

300 Debt Service Fund:

- **Original Budget:** \$1.34B
- **Final Budget:** \$1.36B
- **Actual Expenditures:** \$1.27B

School District Budget Revenue and Spending Report

Total district debt service fund spending was slightly under budget, which reflects tight control over debt service expenditures. This is consistent with stable forecasting of debt service revenues in Figure 3.

400 Capital Projects Fund:

- **Original Budget:** \$3.25B
- **Final Budget:** \$4.11B
- **Actual Expenditures:** \$1.38B

Total district capital project fund expenditures were significantly below budget, at \$2.73B or 66% lower than final budget figures. This may reflect project delays, cost savings, developing capital reserves, or underutilization in district capital project spending.

As opposed to revenues, districts as a whole struggled with forecasting general fund, special revenue, and capital project expenditures. Districts showing large differences between their original, final, and actual expenditures, particularly in the General Fund and Capital Projects Fund, may face challenges in aligning spending with budget projections. These variances could reflect unexpected costs, delays in project implementation, or adjustments made mid-year. Districts in this category may benefit from strengthened budgetary controls and forecasting mechanisms to improve alignment and ensure efficient resource allocation. Additionally, tracking these trends across funds can provide insight into broader financial health and operational priorities.

Figure 5: Adjustments from Original to Final Budget (FY23)

Figure 5 highlights the variance between final and original budgeted amounts across different funds for all districts in the state. This data is collected by the Oregon Department of Education through district submitted audits. The chart was created by subtracting revenues from expenditures (change in fund balance) for each fund and calculating the percent change from original budget to final budget. This gives insight into how flexible districts are with budgeting and how needs arise as the year progresses.

School District Budget Revenue and Spending Report

The total general and special revenue funds saw a slight change in original and final budget figures, indicating either strong forecasting in original budgets or limited flexibility in updating budgets at the districts' ends. The capital projects fund saw the most notable change at an 82% increase from original to final budget. This could mean that capital project costs are quickly growing as the year goes on and that districts are able to be responsive to those needs. It could also mean that districts struggle with forecasting capital project costs or needs in the beginning of the year. The debt service fund saw an 18% increase from original to final budget. This may be impacted by the significant increase in capital project costs budgeted by districts.

In this report, ODE is unable to compare prior years' final budgeted numbers to analyze trends, as this data is not currently collected. However, by examining the differences between original and final budget numbers, one can identify trends and gain insights into the magnitude of changes that occur throughout the budgeting process. These variances highlight the dynamic nature of financial planning and the need for capturing final budget figures to better understand adjustments made over the fiscal year. This insight underscores the importance of integrating final budget data into future reporting processes to enhance accuracy and trend analysis.

Figure 6: Variances between Final Budget and Actuals (FY23)

Figure 6 highlights the variance between actuals and final budgets across different funds for all districts in the state. This data is collected by the Oregon Department of Education through district submitted audits. The chart was created by subtracting revenues from expenditures (change in fund balance) for each fund and calculating the percent change from final budget to actuals. This illuminates districts' ability to forecast and the flexibility with which they update budgets.

District capital project funds showed the biggest variance between actual data and final budgets, which was also reflected in Figures 3 and 4. This variance comes from substantial underspending of capital project funding compared to what was budgeted, as exhibited in Figure 4. The general fund showed the next highest

School District Budget Revenue and Spending Report

variance at 29%. This is due to underspending in the general fund compared to the final budgeted amount for the general fund. These discrepancies underscore the importance of accurate forecasting and adaptive financial management to address shifting priorities and unforeseen financial pressures.

Key Factors Leading to Variances between Final Budget and Actuals

Timing of the Legislative Session and Fund Availability:

- The General Fund (GF) allocations for the State School Fund are determined late in the legislative session, often after April. This delay creates a gap between when budgets are planned and when funds are confirmed.

Lack of Supplemental Budgets:

- The absence of an ODE collection of supplemental budget data prevents tracking and explaining changes from the original budget. This limitation in the data that is collected reduces the ability to analyze the changes that occurring throughout the budget lifecycle.

Forecasting Based on Preliminary Numbers:

- The Governor's Recommended Budget (GRB) serves as a forecast baseline for State School Fund planning. If legislative joint chairs do not adjust this, it can lead to variances since the GRB is only an estimate.

Bond Proceeds and Supplemental Budget Timing:

- Supplemental budgets often account for bond proceeds, which are applied only twice a year. Timing mismatches, such as the March economic forecast determining disbursements for the Student Investment Account, further complicate alignment with the fiscal year.

State-Specific Budgeting Practices:

- Unlike other states that have access to budget numbers of months or even half a year before the budgeting process, Oregon faces tighter time constraints, making accurate forecasting more challenging.

Detailed Budget to Actual Comparison by Source and Major Function

Splitting out revenues by source can support understanding of districts' abilities to plan for and estimate revenues from different sources and their implications for district financial flexibility as time goes on.

Whereas, splitting expenditures by type shows districts' abilities to plan for and estimate types of costs and where supports may be added in those areas.

School District Budget Revenue and Spending Report

Figure 7: Revenues by Detailed Sources (FY23)

Figure 7 shows the budget to actual revenues comparison for all districts across the state, split out by source type.

Local Sources (1000):

- **Original Budget:** \$4.42B
- **Final Budget:** \$4.48B
- **Actual Revenues:** \$4.63B

Actual revenues slightly exceeded both the original and final budgets, indicating local revenue generation forecasts meeting expectations.

State Sources (3000):

- **Original Budget:** \$6.1B
- **Final Budget:** \$6.29B
- **Actual Revenues:** \$6.12B

Actual state revenues came in only slightly lower than original and final budget forecasts, indicating district's ability to forecast state revenue sources well.

Federal Sources (4000):

- **Original Budget:** \$1.64B
- **Final Budget:** \$1.66B
- **Actual Revenues:** \$1.13B

School District Budget Revenue and Spending Report

Federal revenues came in roughly 30% lower than district original and final budget forecasts. This may indicate districts choosing to extend planned ESSER funds into the next fiscal year, which is allowable depending on the ESSER grant timeline.

Other Sources (5100 - Long Term Debt Financing):

- **Original Budget:** \$0.28B
- **Final Budget:** \$0.3B
- **Actual Revenues:** \$0.28B

Revenues closely aligned with the budget, indicating minimal variance in this category.

There was some slight variation in federal revenues from budget to actuals, likely due to flexibility in use of ESSER funding by fiscal year. Districts being able to align budget forecasts to actual revenues supports their abilities to plan and adapt to their flow of resources throughout the year.

Figure 8: Expenditures by Function (FY23)

Figure 8 shows the budget to actual expenditure comparison for all districts across the state, split out by function.

Instruction (1000):

- **Original Budget:** \$6.13B
- **Final Budget:** \$6.21B
- **Actual Expenditures:** \$5.57B

Actual spending on instruction was roughly 10% lower than both the original and final budgets. This suggests some room for improvement in forecasting instruction expenditures.

School District Budget Revenue and Spending Report

Support Services (2000):

- **Original Budget:** \$4.56B
- **Final Budget:** \$4.64B
- **Actual Expenditures:** \$4.1B

Actual spending on support services was about 12% lower than both the original and final budgets. This could suggest district challenges in hiring support positions, overestimating costs, or potential delays in service-related projects.

Facilities Acquisition and Construction (4000):

- **Original Budget:** \$3.41B
- **Final Budget:** \$4.1B
- **Actual Expenditures:** \$1.48B

Similar to Figure 4, this figure again displays that actual expenditures were roughly 60% lower on capital projects than what was forecasted in original and final budgets. This could suggest underestimating capital costs, capital delays, or reallocation of capital funds.

Debt Service (5100):

- **Original Budget:** \$1.31B
- **Final Budget:** \$1.34B
- **Actual Expenditures:** \$1.32B

Actual spending is closely aligned with the final budget, indicating that districts have a strong ability to forecast debt service expenditures and revenues.

Enterprise and Community Services (3000):

- **Original Budget:** \$0.34B
- **Final Budget:** \$0.42B
- **Actual Expenditures:** \$0.43B

Enterprise and community services include expenditures around food services, civic services, community recreation and library services. Actual expenditures for enterprise and community services came in around \$9 million lower than what was budgeted, reflecting efficient management.

In total, districts struggled the most with alignment between budgeting for capital projects compared to actual expenditures. Districts that exhibit significant differences across instructional, support services, or facilities-related expenditures are likely to encounter challenges in maintaining financial flexibility and meeting strategic priorities. Such variances suggest a need for improved budget alignment and operational planning. Understanding these trends can support better resource allocation and fiscal sustainability.

Detailed Comparison by Object

Audit reports are inconsistent in reporting fiscal data at the object level. The Oregon Department of Education (ODE) is currently working to incorporate final budget numbers at the object level into its collection process. This initiative aims to enhance data granularity and improve the accuracy of financial analysis and reporting.

Beginning and Ending Fund Balances

Trends in beginning and ending fund balances highlight the importance of strategic planning and fiscal oversight to ensure sustainable financial health across all districts. Generally speaking, districts with larger beginning fund balances in specific funds, are positioned to better manage unforeseen financial challenges and invest in strategic initiatives. Whereas, smaller fund balances in certain areas may indicate that districts have limited financial flexibility and a higher risk of fiscal distress. Analyzing these patterns helps identify districts that may require additional support or intervention to ensure financial stability.

There was minimal change in ending fund balance compared to beginning fund balances for the general, special revenue and debt service funds. However, As described in detail below, districts maintained a rather high capital project ending fund balance. This could be due to a number of different factors involved with capital projects such as project delays, cost optimization, or intentional reserve accumulation for future infrastructure investments.

Beginning Fund Balances

Beginning fund balance is the amount of funds a district carries from the prior fiscal year to the current fiscal year. Being able to carry forward funds provides districts financial stability from year to year. These balances are critical for district flexibility and stability as fiscal inflows and outflows occur throughout the year. Districts with exceptionally high beginning fund balances may indicate foregone or delayed projects and activities from the prior fiscal year.

School District Budget Revenue and Spending Report

Figure 9: Total District Beginning Fund Balance by Fund (FY23)

Figure 9 shows the total beginning fund balance for all districts across the state, split out by function.

When compared with FY23's actual expenditures, it can be seen that roughly 16% of revenue and 20% of expenditures were carried over from FY22. District debt service funds follow a similar pattern with 14% of actual FY23 revenues and 17% of expenditures. These are generally within what is considered to be an average range.

Districts had a substantial carry over of funds in the capital project fund. The total beginning fund balance for the district capital projects funds is 61% of total actual revenues and 180% of total expenditures when compared with FY23 actuals. That could indicate project delays, cost optimization, or intentional reserve accumulation for future infrastructure investments. In the end, districts carried over more capital funds in beginning fund balances than were spent in the entirety of FY23.

Ending Fund Balances

Ending fund balance is the amount of funds a district has remaining at the end of the current fiscal year. A district's ending fund balance will become their beginning fund balance in the following fiscal year.

The Government Finance Officers Association (GFOA) recommends the financial best practice of maintaining a general fund ending balance threshold of 16% of revenues. A district's ending fund balance helps one understand the district's ability to continue functions into the subsequent year and help determine financial stability.

School District Budget Revenue and Spending Report

Figure 10: Total District Ending Fund Balance by Fund (FY23)

Figure 10 shows the total ending fund balance for all districts across the state, split out by function.

District ending fund balances for both the general fund and the special revenue fund, are very similar to FY23's beginning fund balances. Districts maintained roughly 16% of actual revenues for each fund and 20% of actual expenditures for each fund. Districts' ending fund balance for the debt service fund was also very similar with districts maintaining roughly 17% of actual revenues and 20% of actual expenditures.

Districts' ending fund balance for the capital project fund increased by 10% from the beginning fund balance in FY23. Districts maintained 67% of actual revenues for capital projects and a ending funds to expenditure ratio of 198%. Again, these figures could indicate project delays, cost optimization, or intentional reserve accumulation for future infrastructure investment.

Ending Fund Balance by District

For fiscal year 2023, a total of 54 districts, or 25% of districts fell below the GFOA recommended best practice of retaining 16% of general fund revenues in the ending fund balance. The GFOA is a trusted authority in public finance, providing nationally recognized best practices for budgeting, accounting, and financial reporting. See Appendix A for the full list of district's ending fund balances in the General Fund. Districts within this parameter may face significant fiscal constraints, potentially impacting their ability to manage unexpected expenses or invest in long-term initiatives. Identifying these districts enables targeted support and ensures proactive measures to bolster financial stability and sustainability. Below are some reasons why districts may not have retained 16% of their general fund revenues.

School District Budget Revenue and Spending Report

Operational Challenges:

- Districts with low ending balances may struggle with liquidity, risking delays in payments or cuts to essential services.
- Limited reserves reduce the ability to address unexpected expenses, such as facility repairs or enrollment fluctuations.

Budget Prioritization:

- These districts may need to focus on increasing their reserves by prioritizing cost-saving measures and seeking additional funding sources.
- It is critical to assess whether these low balances stem from structural issues, such as declining revenue or increasing costs.

Monitoring and Support:

- The Oregon Department of Education should identify and partner with districts facing financial vulnerability to ensure operational viability.
- Providing technical assistance or exploring additional funding allocations could help stabilize these financially vulnerable districts.

Best Practices for Districts with Low General Funding Ending Fund Balances:

- Conduct a detailed risk analysis for districts with ending balances below \$0.5M to identify underlying financial challenges.
- Provide targeted support to help these districts develop long-term financial strategies, focusing on revenue diversification and cost management.
- Consider creating a contingency fund or financial safety net for districts with critically low reserves to ensure they can manage emergencies without disrupting operations.

Analysis of Key Trends and Variances

Revenue Trends:

- State and local revenue sources comprise most district revenues, with 45% of revenues coming from the state.
- There was minimal variance between district General, Debt Service, and Capital Project fund final budget figures compared to actual revenue. Some of this is due to the fact that final budgets reflected dynamic adjustments for districts throughout the year.
- The total Special Revenue Fund saw a 14% variance between final budgets and actual revenues, which may indicate some room for improvement in forecasting special revenues.

Expenditure Patterns:

- Instruction and Support Services were the largest categories of expenditures for districts at 42% and 31% respectively.
- Underspensing: Observed in the General Fund, Special Revenue Fund, and Capital Projects Fund, possibly due to challenges with forecasting expenditures, savings or delays in planned activities, or hiring challenges. Capital project fund spending versus final budgeting was the starkest, at underspending of 66% of the final budget.
- Strong Forecasts: The Debt Service Fund final budget figures aligned to actual expenditures, indicating districts' abilities to reliably project debt service expenditures.

Beginning and Ending Fund Balance:

- The Government Finance Officers Association (GFOA) recommends the financial best practice of maintaining a general fund ending fund balance threshold of 16% of revenues. For fiscal year 2023, a total of 54 districts, or 25% of districts fell below the 16% threshold. See Appendix A for the full list of districts.
- Overall, for General Fund, Special Revenue Fund, and Debt Service Fund, district ending fund balances met the GFOA recommended best practice of maintaining 16% of an ending fund balance compared to revenues in those funds. Ending fund balances in these funds reflected slight increases from beginning fund balances in those funds.
- For the Capital Project Funds, districts maintained a substantial amount of capital project revenues at the end of the fiscal year, with districts carrying over 66% of actual FY23 revenues to FY24. Districts spent \$1.38B in capital project funds in FY23 and carried over \$2.73B in capital project funds.

The Role of the ODE in Fiscal Transparency

Fiscal transparency in public education is an essential tool for maintaining accountability, fostering trust, and ensuring that resources are used effectively to support student achievement and equity. In Oregon, fiscal transparency in school district financial operations serves multiple partners, including the legislature, taxpayers, and school administrators. Below are some key reasons why fiscal transparency is critical, along with how it benefits various aspects of the educational and public finance landscape. ODE sees the goals of fiscal transparency as the following:

- 1) Accountability to Taxpayers and the Public
- 2) Better Decision-Making by Policymakers and Administrators
- 3) Improved Financial Health of School Districts
- 4) Promotes Equity and Fiscal Responsibility
- 5) Supporting Federal and State Compliance
- 6) Empowering School Boards and District Leaders
- 7) Facilitating Inter-District Comparisons and Benchmarking

The Oregon Department of Education (ODE) plays a pivotal role in advancing fiscal transparency by:

- **Establishing Reporting Standards:** Through ORS 327.511 et seq, the “State Board of Education has the authority to adopt rules related to the uniform budget and accounting system for school districts and educational service district”. ODE in consultation with the Legislative Revenue Officer, the Legislative Fiscal Officers, and the Oregon Department of Administrative Services (DAS) sets standards and guidelines for financial reporting, such as the Program Budgeting and Accounting Manual (PBAM) structure, to ensure consistency and comparability across districts and compliance with Governmental Accounting Standards.
- **Collecting and Analyzing Data:** Through data collections and reports, ODE provides legislators, policymakers, and the public with insights into district finances. These insights can aid in driving informed policy decisions and provide accountability for public funds.
- **Providing Training and Technical Assistance:** Recognizing that some districts may experience challenges with resources for complex financial reporting, ODE offers guidance training, and technical assistance resources to support districts in meeting transparency requirements. This assistance is paramount to ensuring that all districts, regardless of size or financial expertise, can contribute to the state’s transparency efforts.
- **Exploring Technological Solutions:** ODE is exploring and, in some instances, adopting new technologies to streamline reporting and dashboards for ODE’s partners. These innovations can support more timely, automated data collection, while reducing reporting and administrative burdens on districts.

Current Reporting Challenges and the Path Forward

One key insight from producing this report is that receiving financial data a year and six months after the end of the fiscal year does not meet the needs of districts, administrators, or legislators. Timely and accurate reporting is essential for well-rounded decision-making based on financial information.

Additionally, the ODE has received feedback from many districts that the ODE reporting burden is high and unsustainable. ODE recognizes this concern and is actively working to address it. To reduce the number of financial-related reports districts are required to submit, systems and processes must be implemented that

School District Budget Revenue and Spending Report

allow ODE to maintain the current level of data received while reducing the number of submissions. We look forward to partnering with the legislature, Governor's office and local education agencies on solutions for these challenges.

Possible Solutions for Consideration

1) Adopting a New Collection System

The current collection system was not designed for financial reporting. It does not produce clean, balanced data, and the system's coding setup lacks strict controls, which leads to inconsistent categorization of financial activities. This system also fails to support timely data collection and updates to the chart of accounts. If this system were upgraded, ODE could introduce the capability for districts to submit financial data monthly, which will significantly improve data accuracy and timeliness. This would not be an additional requirement for districts as the monthly data collected will replace several reports currently queued. Further research with program partners within ODE would be necessary to understand which reports a monthly data submission could impact.

2) Adding Grant-Level Reporting

To meet existing grant reporting standards and enhance financial transparency, ODE should collect data at the grant level. Many district systems already have the capability to track grant dimensions, so ODE's primary role would involve providing targeted training to ensure consistent usage. If there was a centralized grant-level data collection it could reduce the reporting burden on districts while also allowing ODE to streamline oversight, improve data accuracy, and focus on delivering better program services and support.

3) Introducing an Appropriation Dimension

Currently the accounting structure does not allow tracking expenditures by specific funding streams or legislative appropriations. Adding an appropriation dimension to the chart of accounts would enhance transparency and accountability by assigning expenditures a code that aligns with the funding source. Implementing such changes will also assist in meeting the several federal reporting requirements.

Building Partnerships and Supporting Districts for Long-Term Success

Collaboration with organizations like OASBO and COSA will be critical to ensuring the success of these changes, these entities are best situated for the local context that is governing budgetary decisions made by local Boards of Education and Superintendents. Training must extend beyond business officials to administrators and board members who may also need foundational financial understanding to make informed decisions. By partnering with these organizations, comprehensive training curricula can be developed that address current gaps and align with the needs of ODE's partners.

ODE is also focused on supporting district staff, given the presence of significant churn within the roles of business official and superintendent continued technical assistance, including resources for training—tailored to varying levels of experience—will ensure that ODE fiscal transparency initiatives continue to grow and prosper.

Conclusion

ODE is uniquely positioned to lead this effort due to its centralized role in maintaining the state's chart of accounts and collecting financial data. The success of fiscal transparency hinges on meeting the needs of the users: school districts, administrators, and policymakers.

ODE sees the goal of fiscal transparency as twofold: where possible simplifying reports through assessment of redundant or duplicative activities, and empowering school districts to leverage all the data that ODE collects to drive greater data driven decisions. Through assessment and alignment of data inbound data, standardization of data collections, and meaningful training, the reporting process can be transformed from a burdensome process to a tool that benefits the children and families of Oregon. This report highlights the department's commitment to accountability and transparency and the role that ODE and education partners play in effective resource utilization. By identifying key trends, challenges, and opportunities, this report serves as a roadmap for enhancing the financial health and operational efficiency of school districts across the state.

The Oregon Department of Education recognizes the challenges inherent in these recommendations but believes they are necessary to address the increasing complexity of school district fiscal management. By continuously reviewing and assessing gaps, the department can infuse a continuous improvement model that will enhance the general awareness of education funding in Oregon. This framework will empower partners with actionable insights and ensure that education resources are allocated effectively in support of student success.

Appendix A: General Fund Ending Fund Balance by District

District ID	District Name	2023 General Fund Revenue	General Fund Ending Fund Balance	Percentage of EFB over Revenue
