

Submitter: Tim Allen  
On Behalf Of:  
Committee: House Committee On Climate, Energy, and Environment  
Measure, Appointment or Topic: HB3119

As we sit through the coldest winter in the US in roughly 35 years it is even more clear that the vehicles we drive and use to get work done are not optional, they are mandatory to the safety and well being of ourselves our friends and neighbors. It is foolish to think that by simply applying pressure to manufacturers and owners of these vehicle to switch to electricity is going to miraculously present a cost effective solution. Stop playing with the lives of the constituents and allow us to make these changes as we are able. The Advanced Clean Trucks legislation must be stopped.
