Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3170

There is nothing more important than networking together all our fantastic trousers into a series of resiliency hubs ready to help when disaster strikes. As a Bellview grange member our little center often serves as an emergency cold weather shelter for the unhoused. We're just one small space, but if we were better networked with the schools, and food security folks — like what Rouge food Network did during the alameda fire. Connecting the dots is fantastic work. We know disasters are coming in the future. Let's be prepared with solar, WiFi hubs, emergency water sources, and electric vehicular.
