

Submitter: Danielle Okuly

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure, Appointment or Topic: HB2143

5NP is easily teachable and repeatable and should be made assessable to all that need or want it. Regular people who did not go to acupuncture school can learn how to do the 5 needle technique and use it to help those in need. 5NP is inexpensive and little risk with huge benefit to many who may not be able to access or afford other treatment methods for addiction, substance abuse, PTSD, and other disorders. Having more people allowed to be trained, allows more people to actually receive 5NP. Having access to this treatment can enable people suffering to get some much needed relief. If a person doesn't like the 5NP treatment, the needles can be removed and there are not long lasting side effects as there are with prescription medications. This brings so much benefit with very little risk to those administering the treatment or receiving the treatment. Please approve this bill.
