Measure, Appointment or Topic: HB3231

More passenger Rail!

Cars are not sustainable. New technologies (EVs) do not improve travel time/congestion and still have major environmental impact (in production, tire wear water pollution etc.)

Infrastructure for personal vehicles is expensive to maintain and expansion is at a huge cost to the environment, communities and simply induces demand.

It is time to prioritize alternatives for our future by investing in efficient passenger rail and public transportation to provide alternatives to personal vehicle use. This is the path to reducing the reliance on cars and all their inherent issues!
