On Behalf Of:

Committee: House Committee On Climate, Energy, and
Environment

Measure, Appointment or Topic: HB2961

I oppose HB 2961. This places undue financial burden on builders of new buildings and parking structures and places responsibility of private fueling needs for a minority of citizens that choose EV as a mode of transportation on new construction, leaving existing building/parking structure owners with no financial investment. It also does nothing for the fueling needs of the MAJORITY of citizens. What about all of the existing buildings and parking structures? If citizens choose to drive EV's, then they should fuel at PRIVATE EV fuel kiosks, just as everyone who owns a gas/diesel vehicle fuels at gas/diesel stations that the government doesn't own/operate or mandate to be built.

Let the consumer dictate the market.
