

Submitter: Ken Bonetti
On Behalf Of:
Committee: Senate Committee On Natural Resources and
Wildfire
Measure, Appointment or Topic: SB747

Dear Chair and Members of the Committee,

My name is Ken Bonetti, I am writing because I am concerned about ongoing fertilizer pollution of our Nations and our local waterways. I have witnessed algae blooms and am aware of the harm such pollution causes in our waterways and its negative impacts on our residents, particularly those least able to avoid those impacts. I am very aware that healthy waterways are a key to healthy ecosystems and healthy human communities.

I am writing in strong support of Senate Bill 747 because it is a critical step toward protecting communities from fertilizer pollution and advancing environmental justice in Oregon. I wholeheartedly agree with the bill's following provisions:

Protect Drinking Water for Vulnerable Communities: Low-income and rural communities are disproportionately affected by fertilizer runoff and nitrate-contaminated drinking water. In places like Morrow and Umatilla Counties, families have been forced to rely on bottled water because their wells are unsafe. SB 747 will provide much-needed transparency on fertilizer use, helping the state identify pollution sources and protect water quality.

Hold Large Landowners Accountable for Pollution: Communities of color and low-income residents often live closest to industrial agriculture operations, where fertilizer runoff pollutes local waterways. These communities bear the health burden of nitrate exposure, which has been linked to cancer, birth defects, and thyroid disease. Large agricultural landowners must be held accountable for their impact on public health. I personally am very much allergic to nitrates.

Reduce Air Pollution That Harms Public Health: Fertilizer overuse doesn't just contaminate water, it also releases nitrous oxide, a dangerous greenhouse gas, and ammonia, which worsens air pollution. Low-income, rural, and BIPOC communities already experience higher rates of asthma and respiratory illness. SB 747 will give state agencies the data they need to track and reduce these harmful emissions.

Prioritize Community Health: Communities facing the cumulative impacts of industrial pollution need stronger protections, not continued exposure to toxic contaminants. SB 747 is a common-sense measure that ensures state agencies have the tools to prevent pollution before it happens, rather than forcing communities to deal with the

consequences later.

Empower Communities with Science-Based Oversight: Environmental justice means making sure public agencies serve all Oregonians, not just polluters. By requiring large agricultural operations to report their fertilizer use, SB 747 ensures that scientific data guides decision-making, so the state can take proactive steps to prevent harm.

I urge you to support SB 747 to protect drinking water, clean air, and public health, especially for the communities most at risk.
