

Submitter: James Marquard

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2961

My wife and I have driven EV's since 2012. Since that time, we have installed a home - in our case a single family residence - which makes owning and driving an EV realistic. The large large number of people interesting in owning and driving an EV, need to also have that option for home charging too. Yes, HB2961 makes sense. Not just for renters but the rest of us because driving EV's is a clear way for reducing Green House Gases.

We urge a YES vote on HB2961.
