

Submitter: Duncan Castle

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2961

Dear Legislators

Providing multifamily housing charging is one of the most important things we can now do to support adoption of EVs with lower income citizens. EV prices have come down and used EVs are very affordable. What is impacting their adoption is not having off the street charging. Choosing to drive an EV is one of the few things that local people can do that has the greatest impact on cleaning the air and reducing the effects of climate change. Please support this bill
