

Submitter: Nathan DeSpain

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2961

Members of the committee,

When I moved into an apartment three years ago I sold the modest EV I owned to buy an ICE vehicle. Despite loving the low costs associated with EV ownership my apartment had no reasonable way for me to charge. Relying on public charging infrastructure was not possible given the size of my EVs battery and the amount I used the vehicle. As EVs become more popular, ensuring adequate access to charging infrastructure in apartments will ensure more apartment dwellers will not have to make the same choice I did.

Thank you for your consideration.
