To whom it may concern,

I strongly support this bill to allow Side by side owners to permit their machines on the road. Many of our local agricultural towns and farms have these machines. In our small communities having an extra "vehicle" in a family without having to add another cost would be really helpful in our current economy. Myself included have been without a vehicle due to repairs before for months, or experienced inclement weather, or a family emergency. If I were able to drive my side by side would have been more practical and helpful. Other States allow these machines on the road and have no issue. I don't see why machines that cost more some cars on the road, and are safer than other road legal vehicles are not allowed. Thank you for your time to hear my opinion.
