On Behalf Of:  
Committee: Senate Committee On Natural Resources and  
Wildfire  
Measure, Appointment or Topic: SB769

Hunting lions with hounds can be an effective wildlife management tool when conducted responsibly and within regulated frameworks. It helps maintain a balanced ecosystem by controlling lion populations in areas where they may become overabundant, potentially causing imbalances in prey species and impacting biodiversity. Hound hunting allows for targeted removal of specific individuals, particularly problem lions that pose a risk to human settlements or livestock, without indiscriminately harming the entire population. It also provides an opportunity for conservation funding, as regulated hunts can generate revenue for wildlife protection efforts and local communities. Additionally, using hounds for tracking allows hunters to monitor lion movements and gather valuable data, aiding conservationists in understanding lion behavior and habitat needs. When properly managed, hound hunting can contribute to the long-term sustainability of both lion populations and the broader ecosystems they inhabit.
