

Submitter: annie capestany

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: SB685

I am already endangered by methane ("natural gas.") It is terribly frightening that the fossil fuel utilities can endanger me even more without having to get permission, or even being required to tell me about it. Just like i want to know what chemicals are in the food I eat, I want to know what chemicals are in the air i breath. (You gotta wonder about the safety of these projects if the utilities are trying to sneak them past us in the dark of night.)

We, the public, deserve to know about projects that can impact our safety and health. It is only with transparency and information that we can truly advocate for ourselves. Please strengthen the power that people have to protect themselves. Vote yes on SB 685.

And while I am a NW Methane customer, it is not just the methane customers who will suffer. If a house explodes or gas is leaked, it endangers people outside that house too. Natural gas doesn't stay within the lines. Protect the people, not corporate profits. Vote yes on SB 685.
