

Hi, my name is Chenoah Konyn.

My daughter, Davida, is 13 years old and was diagnosed with cerebral palsy, epilepsy, and other developmental delays at 7 months old. I've prepared a video for you which is lined here for you to have the opportunity to meet Davida. The video contains pictures of Davida at the University of Oregon, HEDCO Clinic, AAC Camp

<https://youtube.com/shorts/BpubqklMetM>

Davida's life often focuses around therapies, doctor's visits, medications, and adapting the world around her to suit her needs. Our goal as parents has always been to help Davida become as independent as possible. And her communications system is one way that helps our non-speaking girl express herself.

We know that Davida has big dreams, and making friends and experiencing the world outside our home are two of those. Experiencing overnight camp to see the world around her, outside of doctor's offices, is invaluable to her sense of independence and confidence. I hope you will consider funding this opportunity for our daughter and for so many children like her.

Thank you.
