Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2738

I am writing to oppose the ban on leaded gas. In reading all the written testimony, they do not give a study showing, showing it is a danger to the neighborhoods, The two studies that have been done, show no danger.

The statements given for banning, reminds of the cranberry study, showing they cause cancer, but only if you ate about a ton of them, if I recall.

Also, at one time they said brick buildings could cause cancer,

As some said, airplanes and industrial use has more danger than PIR.

Are you going to stop driving a car, because you may a accident and die, Fly in a airplane?

The point is, we face dangers,

There is probably more important to be solved, than PIR.

Thank you.
