Measure, Appointment or Topic: HB2738

The financial and safety impact passing this would be very negative. There could be legal costs associated with braking contracts with racing groups. This track is multi use and very important to the racing community. If this passes the chances of the track staying solvent is slim, but isn't that the real goal you are trying for? To close the track? This is not ok! Closing the track would make the street racing problem worse as the kids/people would not have a safe environment to race their cars causing them to go to the streets. This causes negative outcomes as it increases public safety risks. Just because you have a stick up your ass when it comes to this does not make it ok to ruin it for all the people who enjoy the track, whether it is for spectating or competing.
