

Submitter: Susan Pluta

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2738

Representative Travis Nelson,

As a new Oregon resident, and an active and involved voter I support and appreciate your support of HB 2738 's ban on leaded gas at PIR. As you are aware there really is no safe level of lead exposure, as even the smallest amount can have serious health consequences. Also true racetracks have long been associated with the use of lead, particularly in fuel. However, there are numerous ways to enjoy motorsports without compromising on health or safety. Racetracks can convert to safer, lead-free alternatives, and many around the world are already complying and implementing stringent regulations to reduce environmental contamination. These positive changes ensure that the passion for speed and competition remains both thrilling and safe. By supporting eco-friendly practices, everyone can enjoy the excitement of the racetrack without the risks associated with lead exposure, protecting both spectators and neighboring families.

Thank you for all your efforts,  
Susan Pluta
