Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3336

It seems to me that the utilities as well as the PUC already have a processes in place for reviewing new technologies and implementing them when proven reliable and cost effective. If grid enhancing technologies were "real", as in cost effective and reliable, they would already be on the radar screen. Since someone seems motivated to force the issue I am assuming that these technologies have flaws and are not ready for prime time. There is enough interest in this state regarding energy efficiency that it isn't necessary to force adoption of new ideas by government fiat.
