Measure, Appointment or Topic: HB2738

Hello,

Portland International Raceway has a history of racing for many years. Many of the Race engines can only run on Leaded gas as this is what is needed to allow for such Speed. By imposing this rule when it is not above DEQ standards would cause financial Burdon on PIR as some race's would not be held there, Finacial Burdon on armature racers that would have to travel to other tracks, when this one is in their area. This would take away from Portland's Income as teams come to Portland to Race and would be going elsewhere. At this time, there isn't an alternative to Leaded gas for race engines. This HB2738 would affect many passionate Spectators and Enthusiast , and would be detrimental to Racing as a whole. Not to mention the financial impact to PIR , hotels, restaurants, Portland as a whole that this sport Supports.
