

Submitter: Sue Craig
On Behalf Of: Oregon Unitarian Universalist Voices for Justice
Committee: House Committee On Climate, Energy, and Environment
Measure, Appointment or Topic: HB2038

Thank you all for this opportunity to testify. The problem of a study is that it takes highly qualified people who know a great deal about the present problems of nuclear production, and especially the problem of nuclear waste. At present, we hope to keep our law in place, that prohibits production of any nuclear type of reactor in Oregon. The very simple reason for this, is that there is NO way to contain nuclear waste developed anywhere in our world. It would need to be contained for literally centuries, and we humans, simply not know how to do that. So....at present, this would be a waste of taxpayer money. And with the current problems at the Federal Level, we need to be very careful, in Oregon, of our use of our tax dollars. Please do not pass this bill. It would truly be wasteful, and would in no way find a way to contain nuclear waste over a life time of that waste.

Thank you. Sue Craig President of Oregon Unitarian Universalist Voices for Justice.
