

Submitter: Dave Peticolas

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3336

Oregon needs to vastly expand its transmission capacity to meet its laudable clean energy targets and to unlock energy abundance for Oregonians. Grid Enhancing Technologies are an obvious and effective part of that expansion, but current policies discourage their use because these technologies are not capital intensive. This bill would help align incentives of transmission builders to promote the use of these important technologies. I urge you to support this bill as an important step towards a clean and energy abundant future.
