House Committee on Climate, Energy & Environment

RE: HB 2410

Chairperson Lively and members of the Committee,

I write to you today opposing HB 2410 and strongly encourage you to table this proposal.

The citizens of Oregon spoke clearly in 1980 about siting nuclear power plants – regardless of size – until a suitable licensed repository for waste created by such plants is established. Forty five years later little has changed regarding waste disposal. This proposed legislation is therefore premature and certainly flies against common sense about the dangers of radioactive waste.

Please keep the bill in Committee.

Thank you for your consideration.

Alex Sifford

Neskowin, Oregon
