On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3336

Dear Members of the House Committee on climate, Energy and Environment,

Grid Enhancement Technologies are a cost-effective way of increasing the capacity of our existing transmission infrastructure in the near-term.

Because utilities earn a return from investments, and GETs decrease the need for major investments, they have not received the acceptance in the US that they enjoy in Europe. However, GETs are the cheapest and quickest way to create more capacity in our transmission system!

This bill would require Oregon electric utilities to incorporate GETs into their future planning.

Please support this bill.

Gordon Molitor
