

Submitter: L Cornell

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: SB726

Methane is a toxic greenhouse gas that contributes to the growing climate crisis. Landfills contribute greatly to the release of methane into the environment and is toxic to humans as well as all animal life. Studies have shown exposure to it causes serious health issues in humans. It needs to be monitored so we know how much is being released into the environment. A problem cannot be corrected until it is defined and addressed, monitoring is needed. I urge you to please support SB 726.
