

Submitter: Christine Taylor

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3336

I'm writing in support of HB 3336.

I believe that our electrical grid system needs analysis and updating. This is particularly urgent given Oregon's history of recent wildfires. Additionally, with increased population, there is increased demand on a system that was designed before the stressors of climate change and increased population

I've lived in Oregon for 55 years, my children and grandchildren were born here, and all of us treasure Oregon's natural environment. We love these forests and our own beloved neighborhoods. Thank you for your consideration.
