

Submitter: Linda Ganzini

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3336

Dear House Committee Members,

I write in support of HB 3336 which requires Oregon utilities to incorporate Grid Enhancing Technology planning into our transmission system. In the short term this can increase transmission, reduce conflicts, and get us to more clean energy into Oregon homes and businesses. These technologies are underutilized only because utilities do not get a return on investment. They do have a good track record and are a sensible and cost-effective solution.
