Re: Support for HB 3450 Tells ODOE to make an energy storage transition plan for  
bulk oils and liquid fuels terminals.

Dear Chair Tran, Vice-Chair Grayber and Vice-Chair Lewis,

I support HB 3450 that tells ODOE to make an energy storage transition plan for bulk oils and liquid fuels terminals. The creation of such a plan for short, medium and long term goals for the critical energy instructor hub is a necessary step for the resilience of the energy sector in Oregon. Engaging stakeholders, technical experts, researchers, state and local government and other interested parties, in developing such plan, will improve safety, help develop emergency planning for adequate response, and aid in the prompt recovery of the energy sector following an earthquake.

Sincerely,

Jay Raskin, FAIA  
Past Chair of OSSPAC
