

Submitter: Joan Kleban

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2410

Small modular nuclear reactors are dangerous producers of nuclear waste. There is no viable solution to disposing of the cancerous residue by-products emitted from the nuclear reactor process.

Who will live next door to these devices? What comprehensive plan for regulating the safety of small reactors in pocket communities is viable? It appears that the potential for accidents is highly probable.

Nuclear power is NOT the answer.

Please vote no on this bill.
