Committee: Senate Committee On Energy and Environment
Measure, Appointment or Topic: SB218

I support this bill. If we are to implement green energy there needs to be studies done on all positive and negative impacts of the implementation, use, upkeep, disposal and all environmental impacts of the practices.

For instance we use a great deal of energy producing lithium batteries and the environmental impact of the mining operations, disposal etc of lithium waste is extremely concerning and we should study those impacts and we should study the impacts of the solar heat produced from large solar operations and the impact of wind fields on birds.
