On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2410

Nuclear Energy is too expensive and slow to set up for this to be a good idea. It is incredibly dangerous and wasteful of our resources. Truly renewable energy is the best solution for Oregonians. One of the reasons I moved here was to get away from nuclear energy plants. They reduce property values and increase danger in communities significantly. We are also in a very disruptive political climate and we are making more and more enemies throughout the world all the time. That, plus all the domestic terrorism against power plants is concerning. If we add more nuclear plants into the mix, we are only adding targets for our enemies to exploit. Please vote no on this disastrous bill.
