Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2410

I am writing in opposition to HB 2410. Nuclear power in this country has been an economic sink hole. It would not even exist if the government didn't subsidize it with both the liability shield and nuclear waste disposal. No small modular reactor is operating anywhere in the world. The last utility scale nuclear plant built in the US, Vogtle, will saddle Georgia rate payers with the most expensive electricity in the world, costing them \$10,784 per kilowatt hour, compared to \$900 – \$1,500 per kilowatt hour for wind, solar, or natural gas.

Thank you for stopping this boondoggle before Oregon ratepayers end up on the hook for it.
