

Submitter: Joe Giordano

On Behalf Of:

Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2410

I do not believe it is in the best interest of our future and the environment we live in, to use nuclear power. MORE of everything is not the answer. We must tighten our belts and build a life based on less energy consumption, and use renewable energy. Instead of nuclear we can put our efforts into innovation in renewables. The nuclear waste issue is just not safe, no matter what anyone says, the stuff is not natural and not safe. In terms of the current science, there will inevitably be problems. It will pollute somewhere sometime and we just don't need to do that.
