

Submitter: Andrew Simrin

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: SB216

The people of the state won't have a choice in the matter if SB215 is passed with regard to siting of nuclear power plants. The requirement that there be a licensed disposal site is important for proper waste management, and the quality of our water and land. We know that wind and solar are renewable and affordable.

Thank you.
