

Submitter: Andrew Simrin

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure, Appointment or Topic: SB635

I cannot support the study of feasibility for nuclear energy generation that does not take into account the disadvantages or risks associated with the energy generation.

There are great risks to our water, land and wildlife.

We know there are many disadvantages among some advantages, but we know that wind and solar energy is clean, renewable, and abundant.

Thank you.
