Care

Measure, Appointment or
Topic: HB3439

I support requiring naturopathic services as a covered part of health benefit plans offered by PEBB and OEBB. It not only makes sense from a health care perspective, but can also result in lower health care claims. As a recipient of naturopathic services, I wholeheartedly support this measure. This modality of care is a very viable option and should be included as a covered service. Naturopathic practice emphasizes taking care of one's physical and emotional health in a preventative and remedial sense, which could actually be more cost effective in many instances.
