Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB3546

As we have seen the demand for energy rising from data centers, we have also seen prices skyrocket for household utility bills. The POWER ACT will ensure that utility costs can be tracked and billed appropriately to data centers by creating a new customer category at each for-profit electric utility. HB 3546 protects families and small businesses from paying for data center-specific costs when these new users are connected to the energy grid and when they add new costs to the system in the future.

This is a good, necessary and fair bill.
