Committee: House Committee On Climate, Energy, and Environment

Measure, Appointment or Topic: HB2679

My 1-acre yard in Talent, Oregon has been certified as a pollinator garden. This means I am dedicated to supporting pollinators of all kinds, insects, bees, butterflies, birds, which means creating a safe, non-toxic habitat for these creatures. Spraying neonics and other toxic chemicals anywhere near would be disastrous for the health of these precious creatures. There are so many non-toxic ways to get rid of unwanted pests and diseases that nobody should be able to resort to these destructive substances. Please ban these chemicals from garden and agricultural products.
