

Submitter: Helena Du
On Behalf Of:
Committee: House Committee On Education
Measure, Appointment or Topic: HB3365

Dear Legislators,

Thank you so much for taking the time to read over my testimony. As a current high school student, the topics of climate and global warming have continuously been on my radar, leading to my discovery of Our Future and a passion to help make my community more sustainable. With the issues of polar ice melting and increase in ocean temperatures, these changes to our Earth are leading to detrimental effects amongst the wildlife as well as human life and populations as well. So, as a student I support HB3365, which would provide students with climate education, helping to raise awareness of this issue and also help students to become more equipped and able to face the challenges of environmental issues.

While in school we learn a lot about the basics of math, science, history, and English, we aren't taught enough the effects of our actions on the climate. As we continue to guide the future leaders and generations into the real world, it is important that they understand the impacts and current events that are affecting our planet. Without this type of education, students won't be able to lead and guide the future to ensure the sustainability and longevity of our planet.

Once again, thank you so much for taking the time to read through this testimony. I actively support this bill.

Sincerely,
Helena Du
