

Submitter: Linda Kelley

On Behalf Of:

Committee: House Committee On Climate, Energy, and
Environment

Measure, Appointment or Topic: HB3477

I am in strong support of HB 3477. We must stay current on the goals that were set a few years back as we see our timeframe to avoid the more extreme effects of our actions has tightened. We must be precise on language referring to the changes we are seeing in an effort to help people better understand the science. the recognition of our natural lands to store and sequester carbon is very important. It is our best path forward while we continue the process of transitioning off of fossil fuels. Thank you for accepting my testimony and for your continued work on our behalf.
